

Digital Literacy Project Report

Name: Prayash Das

Registration Number: 25BCE10549

Branch: B.Tech CS core

Year: 1st Year

Course Code: CSE0001

Date: 31st March, 2026

Introduction

Digital literacy is an essential skill in today's technology-driven world. As a Student Digital Ambassador, my role is to help peers understand how to effectively and responsibly use digital tools and platforms. This project focuses on building awareness about digital literacy, creating a professional online presence, exploring coding and collaboration platforms, understanding email etiquette, and learning about cybercrime prevention.

Through this project, I explored various tools such as GitHub, LinkedIn, and Google Forms, and applied them practically. Each task helped me develop skills that are important for both academic and professional growth. This project not only improved my technical knowledge but also enhanced my understanding of safe and responsible digital behavior.

Task 1

For Task 1, I created a digital literacy awareness infographic using Canva. The infographic highlights key aspects of digital literacy, including safe internet practices, useful digital tools for students, and the importance of maintaining a professional online presence.

The design includes sections explaining what digital literacy means, examples of tools like Google Workspace and GitHub, and tips such as using strong passwords and avoiding suspicious links. I used simple visuals, icons, and structured layout to make the content easy to understand.

One challenge I faced was selecting the most important information and fitting it into a single page without making it cluttered. However, this helped me improve my ability to summarize information effectively. Overall, this task enhanced my creativity and design skills while reinforcing the importance of digital awareness.

Task 2

In Task 2, I created and updated my profiles on GitHub, LinkedIn, and HackerRank. These platforms are important for building a professional digital presence.

GitHub is used to showcase coding projects and collaborate with others. I created a profile README including my name, branch, and learning goals. LinkedIn is a professional networking platform where I added my education details and started building my profile. HackerRank is a coding practice platform that helps improve problem-solving skills.

Over the next four years, I plan to use GitHub to upload projects, LinkedIn to connect with professionals and explore opportunities, and HackerRank to improve my coding skills. This task helped me understand how maintaining an online presence can support career growth and learning.

Task 3

For Task 3, I explored both coding and collaboration platforms. I used HackerRank to complete a beginner-level coding challenge, which helped me practice basic programming concepts and improve my problem-solving skills.

Additionally, I created a Google Form as a Digital Literacy Awareness Quiz. The form includes five questions, such as multiple-choice and short-answer questions related to online safety and digital tools. I also viewed responses in Google Sheets, which helped me understand data collection and analysis.

These tools are very useful academically. Coding platforms help improve logical thinking, while Google Workspace tools support collaboration and data management. This task showed me how digital tools can make learning more interactive and efficient.

Task 4

Poor digital communication can lead to misunderstandings and missed opportunities. For example, if a student sends an email to a professor without a proper subject line or respectful tone, it may be ignored or considered unprofessional.

This task helped me understand the importance of clear communication, proper structure, and polite language in emails. Writing professional emails requires attention to detail, including greetings, body content, and sign-offs.

By learning email etiquette and social media responsibility, I can communicate more effectively and maintain a positive digital reputation.

Task 5

While researching cybercrime, I was surprised to learn how common phishing and online payment fraud have become, especially among students. Many attacks happen simply because users are unaware of basic safety practices.

This task made me more cautious about clicking unknown links and sharing personal information online. One habit I will change is always verifying the authenticity of websites and messages before taking any action.

Overall, this task increased my awareness of online threats and the importance of staying vigilant in the digital world.

Conclusion

This project provided a comprehensive understanding of digital literacy and its importance in academic and professional life.

Through various tasks, I learned how to create digital content, build an online presence, use collaboration tools, communicate professionally, and stay safe online.

The experience has improved my technical skills, awareness, and confidence in using digital platforms. As a Digital Ambassador, I now feel better prepared to guide others in using technology responsibly and effectively.
